Automation & Control

What is a Control System?

AMX control solutions simplify the automation and integration of your audio / video, environmental and communications technologies through intuitive user interfaces, such as touch panels.

AMX solutions can be broken down into three basic parts - User Interface, e.g. touch panels, Controllers and any electronic equipment you want to control. You are limited only by your imagination.

Command

This is your window into the world of control. AMX Touch Panels display sharp icons, vivid graphics and seamless video. Instantly take control of integrated piece of audio/video, environmental and communications equipment by simply pressing on-screen command buttons.

Control

The AMX Control System is a catalyst for making control happen throughout your environment. The Controller translates information between Touch Panels and the connected equipment to obtain the desired results.

Communicate

The AMX Control System is engineered to communicate with any electronic equipment, such as cameras, pagers, PDA's, intercoms, video monitors, plasma screens, projectors, DVD and VCR players, lighting, thermostats, personal computers and more.

AMX could be used as part of a home cinema room installation. Simply touch one button to close all the curtains and blinds, dim the lights, activates the digital projector, lower the projection screen, start the DVD player, increase the sound gradually, and turn on the air conditioning. No remotes. No hassle. Just sit back and enjoy the movie!

A HOME FOR MUSIC & MOVIES

The Ivy House offers a complete design and installation service to Architects, Designers, Developers and the Homeowner.

Multi-room audio solutions | Home cinema rooms | Intelligent lighting | Automation & control | Bespoke furniture | Communications networks
