

The Ivy House

Soundservers and Network Audio

Imagine recording your entire music collection, played back easily and conveniently in high quality audio. Soundservers allow all this, distributed over digital networks. The Ivy House is pleased to recommend Imerge soundservers and network audio solutions - a recognised leader in Internet-connected, hard disk-based audio products and media appliances.

Soundservers

The Imerge S2000 soundserver combines a hard disc with advanced software to revolutionise the way we enjoy music.

Store hundreds of hours of music and conveniently browse your collection by album name, artist name or genre. With fast, easy access to your music collection and a host of different playback options it's easy to listen to what you want when you want to.

Play CD's directly or store on the hard disk in a variety of audio formats

With personal playlists, you can even pre-programme your listening, allowing you to quickly and easily play music that suits the occasion.

TV interface allows you to browse your music collection from the comfort of your armchair

Enjoy different music in different rooms - all at the same time
S2000 allows simultaneous playback of different tracks in up to 4 different rooms so you can listen to Mozart in the kitchen, while U2 plays in the living room, and jazz plays in the bedroom

Choice of up to 4 discrete outputs allows simultaneous playback of different tracks in up to 4 different rooms

Convenient ways to access your music collection
A variety of control options include a built-in TV interface that also displays the album cover, and support for a host of leading multiroom controllers. The S2000 is the ideal music source for a home cinema or multiroom audio system.

Supplied with 'universal' remote to control your amplifier and TV as well as your Soundserver

S2000 features

TV interface including album cover illustration

- Choice of storage options
- Stores audio in a variety of formats both compressed and uncompressed
- Play directly from CD or from the hard disk library
- Choice of up to 4 discrete outputs
- Optional support for Imerge NP200 Network Audio Player to stream audio over your home network
- Accesses the Internet for album, artist and track information as well as album cover illustration
- Compatible with leading multiroom controllers, e.g.

The Ivy House

Soundservers and Network Audio

Network Audio

What is a network audio system?

A Network Audio Player is a device which can digitally stream audio from a central server - each player can browse the entire library - independently selecting an individual track, custom playlist or complete album, artist or genre for replay. So while Dad is listening to Eric Clapton in the living room, Mum can listen to Bach in the dining room, whilst the children can listen to Britney Spears in the bedroom all streamed from the same server.

The Imerge NP200 Network Audio System

One server, 6 players

Up to 6 players can be attached to a single server using an Ethernet connection - fully integrating with the wiring for your home network and unlike analogue hi-fi cables the audio doesn't degrade over distance.

Another room?

Simply add another player to expand your installation.

Complete compact audio system includes built-in amplification

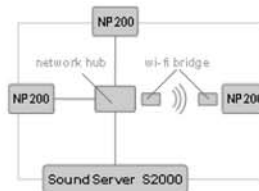

Easy to use interface allows you to select music by album, artist, genre or custom playlist.

Massive range of radio stations accessible through FM/AM tuner and Nettune internet radio. You can even use the NP200 as an alarm clock to wake up to your favourite album track or radio station!

Fully compatible with the Philips Pronto touch-screen remote control

Use existing home network wiring infrastructure
